

a Keep the learner fixed, change the response sources

	COSMOtherm	Abraham	OpenFF	GBn2	SMD(water)	ConfSolv
Full model 15 responses			physical + δ	physical + δ		
Computation-only 10 responses		Omitted	physical	physical		

Remove five Abraham values and two residual corrections (δ). Retain the two physical energies.

Both models learn hydration from the same experimental labels.

b Compare absolute errors

c Compare the source sets directly
